The respiratory system is charged with the responsibility for taking in oxygen and expelling carbon dioxide. In class this week we also got to learn about the circulatory system and the blood vessels which help transport it across the parts of the body. See how much you know about these two systems and their functions by taking the quiz below.

Circulatory And Respiratory System Quiz - ProProfs Quiz

Definition The circulatory system, also known as the cardiovascular system, consists of the organs and fluids that transport materials across the body. All vertebrates, including humans, have a closed circulatory system, which means that blood remains within blood vessels and does not directly interact with body tissues.
