### Genetics and criminality: the potential misuse of ...

Debates about criminality have long focused on the relative contributions of environment and genetics as components of antisocial and destructive behaviour. Although genetic explanations for criminal behaviour have been circulated since the emergence of modern criminology in the 1700s, until recently, there has not been the scientific evidence to substantiate or refute any claims.

### Is there a genetic susceptibility to engage in criminal ...

A genetic analysis of almost 900 offenders in Finland has revealed two genes associated with violent crime. Those with the genes were 13 times more likely to have a history of repeated violent ...

### Two genes linked with violent crime - BBC News

genetic diagnosis will be done scientifically but what is intelligence and what is criminality will be defined or distorted as per the whim and fancy of the society. For example, the genetic diagnosis for the trait of preference to non-vegetarian food may be thought as normal in the western world and potentially criminal (physical abuse) in countries like India.

### what is 1 potential implication for the genetic diagnosis ...

Some criminologists indicate that genetics have little to no affect on criminal behavior but rather estimated levels of self-control identify potential criminal behavior. For instance, "Gottfredson and Hirschi (1990, p.97) are clear in their assertion that 'ineffective child rearing' is the 'major' cause of low self-control" (Unnever, Cullen, and Pratt, 2003).
