Bioremediation is a process used to treat contaminated media, including water, soil and subsurface material, by altering environmental conditions to stimulate growth of microorganisms and degrade the target pollutants. Cases where bioremediation is commonly seen is oil spills, soils contaminated with acidic mining drainage, underground pipe leaks, and crime scene cleanups.

Bioremediation - Wikipedia

Eoin H. Macdonald, in Handbook of Gold Exploration and Evaluation, 2007 Empirical modifications to Stokes' and Newton's laws Gaudin (1939) proposed modifying Stokes' law by empirical correction factors in order to predict the terminal velocity of similar sized (fine) particles under hindered settling conditions.
