### Photography Night Sky: A Field Guide For Shooting After ...

In night sky photography, except for star trails, you want to have stars like points of light. But stars move across the horizon at, on average, about 15°/ hour because of Earth's rotation. That does not seem much when we stargaze. But consider that a 100mm lens on a full-frame camera gives you a field of view of only about 20° x 15°.

### A Beginners Guide to Shooting Night Sky Photography

Photography: Night Sky: A Field Guide for Shooting after Dark. As a professional photographer, I've always said, "If you can see it, you can shoot it." Taking photographs with little or low light has always been my favorite way to shoot, whether it's by candle, headlamp, starlight, fireworks, campfire, or moonlight.

### Photography Night Sky: A Field Guide for Shooting After ...

Shooting time-lapse sequences is similar to shooting a single image in that exposure is based on the shooting conditions. For time-lapse photography of the stars in the night sky, use an aperture of about f/5.6 if the moon is full, f/2.8 if the moon is not full. In manual exposure mode, shoot a test shot at 10 seconds.

### **Photographing the Night Sky | Nikon**

As we're closing out summer and heading into shorter days and longer nights, it's an ideal time to practice astrophotography. Night sky photography gives you a great chance to head out and capture beautiful images of the Milky Way and constellations in the night sky.
